Mill Specs

[Home](#) / Printed Circuit Board Mill Specs

PCB Specifications

All PCB layouts submitted for fabrication must meet the following specifications:

- **Maximum PCB size:** 9" x 12" (but try to minimize the size of your PCB to save material)
- 2-layer (front and back), FR-4 laminate material, 0.059" (59 mil) PCB thickness
- 2 oz/ft² copper on each side
- For power and ground traces, use a [trace width calculator](#) to determine the correct line width and avoid traces popping when you power up the board. Use a minimum 40 mil line width and 6 mil space between traces for all power and ground traces.
- For signal traces, a 15 mil line width and space is recommended. Use a minimum 15 mil line width and space for all signal traces.
- [Plated-through holes \(PTH\)](#) OK
- [Solder mask](#) layers OK
- It is recommended to put text in your soldermask or copper layers
- Vias okay, but no [blind or buried vias](#).
- Minimum hole and via size: 0.5mm
- **File format:** Gerber 274X

We have also listed all of the available bits that we have on hand and some notes on what they are each used for throughout the manufacturing process.

| Peralta 109 LPKF S63 Mill Bit Selection Table | | | | | |
|---|-----------|-----------|------------|---|---|
| Bit Type | Size (mm) | Size (in) | Size (mil) | Usage | Notes |
| Counter Router | 1.0 | 0.0394 | 39.4 | Used for cutting the board outline as well as opening holes | Board outline fileExtension: .art |
| | 2.0 | 0.0787 | 78.7 | | |
| | 3.0 | 0.1181 | 118.1 | | |
| Drill | 0.5 | 0.0197 | 19.7 | Used to make drill holes for through hole parts as well as mounting holes | Do your best to consolidate your design to the least amount of drill sizes need. The more drill sizes needed in a design will require more tool changes = |
| | 0.6 | 0.0236 | 23.6 | | |
| | 0.7 | 0.0276 | 27.6 | | |
| | 0.8 | 0.0315 | 31.5 | | |
| | 0.9 | 0.0354 | 35.4 | | |

Peralta Engineering Studio

| | | | | | | |
|--|----------------|-----|--------|-------|--------------------------|---|
| | | 1.2 | 0.0472 | 47.2 | | sizes outside of the ones available here = more time needed to run you design. |
| | | 1.4 | 0.0551 | 55.1 | | |
| | | 1.5 | 0.0591 | 59.1 | | |
| | | 1.6 | 0.0630 | 63.0 | | |
| | | 1.8 | 0.0709 | 70.9 | | |
| | | 2.0 | 0.0787 | 78.7 | | |
| | | 3.0 | 0.1181 | 118.1 | | Drill File Extension: .drl |
| | Endmill | 0.2 | 0.0079 | 7.9 | Used for removing copper | Only use these in a design if necessary. This process can take a long time depending on the amount of rub out |
| | | 0.8 | 0.0315 | 31.5 | | |
| | | 1.0 | 0.0394 | 39.4 | | |
| | | 2.0 | 0.0787 | 78.7 | | |

Peralta Engineering Studio

| | | | | | |
|-------------------------|-----|-------|-----|-------------------------|---|
| Universal Cutter | 0.1 | 0.004 | 3.9 | Used for cutting traces | Top and Bottom files Extension: .art |
| | 0.2 | 0.008 | 7.9 | | |

| Peralta 109 LPKF S63 Mill's Minimum Requirements | | |
|---|---|--|
| Item | Minimums | Notes |
| Trace widths | Signal Traces = 15 mil, 0.015 in, 0.381 mm Power Traces = 40 mil, 0.04 in, 1.02 mm | The 15 mil trace is the absolute minimum trace width your design should include. The current on those lines should not exceed 500mA for 0.5oz copper. For correct sizing for currents over 500 mA use a trace width calculator . |
| Vias | 19.7 mil, 0.0197 in, 0.5 mm Recommended values 31.5 mil, 0.0315 in, 0.8 mm (0-5amp) Or 78.7 mil, 0.0787 in, 2 mm (5-10amp) | The default in cadence is too small, please edit it to these sizes or bigger. |
| Package Sizes | Two Terminal Packages– Resistors and Capacitors = 0805 Three Terminal Packages– Small-outline Transistors = | These packages produce good results from the LPKF circuit board mill. While it still can do smaller packages, avoid them as it |

Peralta Engineering Studio

| | | |
|------------------------------|--|--|
| | cannot be smaller than 20 mil, 0.020 in, 0.51 mm– Pitch cannot be smaller than 31.5 mil, 0.0315 in, 0.80 mm– No QFNs or BGAs | Manager. |
| Insulation Clearances | Thru Pin = 5 milSMD Pin = 5 milVia = 5 milLine/cline = 5 milShape/rect = 5 mil | Set these values to 10 mil to begin with then lower if need. |
